(DUNDURN)
STREET SHOP FIRE

1908.

A STRANGE EXPLOSION CAUSES A FATAL FIRE

Railway Car Shops on Garth Street Destroyed
Early This Morning

George Perkins, an Employe, Dead and Other
Employes Injured

Dead—George Perkins, ~~35~~ Main street west.

Injured—James Collins, Main street west.

Richard Berryman, fireman.

Cause of fire—Explosion of natural gas.

Approximate loss—\$10,000.

Length of fight—2.10 to 5.05.

The above, in brief, tells the horrible story of a disastrous fire which occurred in the early morning at the T. H. and B. car shop at Garth street, as a result of which one man was fatally burned and two others painfully injured. An explosion of natural gas caused the trouble, and the fire had unchecked sway for a considerable period, the escaping gas immediately adding fuel and all the time apparently growing larger as the pipes melted away. While the gas escape continued the firemen contented themselves with fighting the fire in other parts of the building, and it was not until the flow was checked that the real work of extinguishing the blaze commenced. Perkins died at the city hospital shortly after 6 o'clock this morning, and Cor-

between the frame work and the corrugated iron.

SHUT GAS OFF

While the fight continued, efforts were being made to have the gas turned off. The fire on the walls and ceiling might be extinguished, but water would have no effect on the leak. The Ontario Pipe Line officials were called up, and finally the gas was turned off at the Aberdeen avenue reducing station. The big sheet of flame disappeared at once. The fire, however, had too good a start, and it took two hours of hard work to get it under control. The open construction of the place caused a mighty draught, which fanned the flames and made the work of the department much harder than it would ordinarily have been. Seven streams were used, and slowly but surely the tons of water had the desired effect. The blaze gradually diminished.

THE PROPERTY DAMAGE

There were three passenger coaches standing on the west side of the shop, and these caught fire. The chief had them soaked with water, and saved them from total loss, until a locomotive pulled them from the danger zone, when the fire was finally extin-

H. and B. car shop at Garth street, as a result of which one man was fatally burned and two others painfully injured. An explosion of natural gas caused the trouble, and the fire had uncheckered sway for a considerable period, the escaping gas immediately filling the building, so that all the fuel and all the time apparently growing larger as the pines melted away. While the gas escape continued

the men contented themselves with the names of the dead and the injured. Despite standing on the ground.

THE PRICE OF GAS

Superintendent Byrne, of the Ontario Pipe Line Co., stated this morning that the announcement yesterday that the price of gas would be reduced to 30 cents to-day is slightly misleading. The arrangements have not yet been completed, although it is expected that meeting, to be held this week, with the Dominion Natural Gas Co., they will be. The price will be dated back to the first of November when the arrangements have been completed.

Pertinent and Important

Cement sidewalks spot a heap of Hallowe'en "sport."

This battery work in St. Catharines seemed to be all right; but the Queen's game was won by Fielding.

No, Hallowe'en is not that. It used to be when you and I were boys.

Question—What are the results of the accident?

Answer—A thousand and one things.

In various outlying parts of the city the board of works might have seen a death on the evidence this morning.

The part of the boy to have certain supererogatory and unqualified board walks confident.

Fielding has a thousand and one.

A friend suggests that the manager of the street lighting set those small catchers so the passengers while going to bed.

Injured—James Collins, Main street west.

Richard Berryman, fireman.

Cause of fire—Explosion of natural gas.

Approximate loss—\$10,000.

Length of fight—2.10 to 5.05.

The above, in brief, tells the horrible story of a disastrous fire which occurred in the early morning at the T. H. and B. car shop at Garth street, as a result of which one man was fatally burned and two others painfully injured. An explosion of natural gas caused the trouble, and the fire had unchecked sway for a considerable period, the escaping gas immediately adding fuel and all the time apparently growing larger as the pipes melted away. While the gas escape continued the firemen contented themselves with fighting the fire in other parts of the building, and it was not until the flow was checked that the real work of extinguishing the blaze commenced. Perkins died at the city hospital shortly after 9 o'clock this morning, and Coroner Griffin will open an inquest this afternoon.

THE BUILDING

The scene of the fire was the T. H. and B. car shop, a building 160 feet long and about 30 feet wide. It is only one story high, and is made of frame, being covered with corrugated iron. In this place the general repairing was done, and the place was also used as a machine shop and blacksmith shop. Tracks run into the place and there was a partition close to the door. There was a heavy furnace in the rear.

between the frame work and the corrugated iron.

SHUT GAS OFF

While the fight continued, efforts were being made to have the gas turned off. The fire on the walls and ceiling might be extinguished, but water would have no effect on the leak. The Ontario Pipe Line officials were called up, and finally the gas was turned off at the Aberdeen avenue reducing station. The big sheet of flame disappeared at once. The fire, however, had too good a start, and it took two hours of hard work to get it under control. The open construction of the place caused a mighty draught, which fanned the flames and made the work of the department much harder than it would ordinarily have been. Seven streams were used, and slowly but surely the tons of water had the desired effect. The blaze gradually diminished.

THE PROPERTY DAMAGE

There were three passenger coaches standing on the west side of the shop, and these caught fire. The chief had them soaked with water, and saved them from total loss, until a locomotive pulled them from the danger zone.

When the fire was finally extinguished it was easily seen what damage had been done. There were two flat cars in the place, and these were destroyed. The superstructures were gone, and the wheels and axles were badly twisted. Valuable machinery was in the shop, such as lathes and big automatic hammers. It is impossible to tell at the present time just how the fire affected this machinery, but the statement is made that some of it is totally destroyed, and will be replaced at any cost. The boiler-room is still burning, and there is more smoke than ever.
